

COMPANY PROFILE • FY 2025-26

Nothing Is Waste Until It Is **Wasted.**

An authorised, integrated recycler recovering value from electronic, plastic and battery waste — with the documentation to prove it.

A Recycling Company Built for India's Next Decade of **Waste**

India generates over **1.7 million** tonnes of electronic waste every year, and less than a third of it reaches a formal recycling channel. The rest is burned, buried or broken apart by hand.

Advait Green Recycling exists to change that ratio.

We are a **GPCB** authorised recycler operating an integrated facility at **Location, Gujarat**, processing electronic waste, plastic waste, battery waste and industrial scrap through mechanical and chemical recovery lines. Our work sits at the intersection of three outcomes that usually get treated separately — **environmental compliance, data security, and material recovery.**

For our clients, that means one partner, one documentation trail, and one accountable point of contact from collection to certificate.

The name **Advait** means “not two” — the idea that industry and environment are not opposing interests. A recycling business that isn't commercially sound will not survive to protect anything; one that isn't environmentally rigorous doesn't deserve to.

AUTHORISED & CERTIFIED

CPCB Registered Recycler	GPCB Authorisation	ISO 9001:2015	ISO 14001:2015	ISO 45001:2018

RECOVERED CIRCUIT BOARD FRACTION, PRE-SHREDDING

What We Are Building

OUR VISION

A resource economy where end-of-life is simply a stage in a material's life — not the end of it.

Our Mission

- To provide waste generators with a formal, fully documented and commercially fair recycling channel.
- To maximise material recovery and minimise residue to landfill on every consignment we accept.
- To make regulatory compliance straightforward for producers, importers and brand owners.
- To create safe, skilled and dignified employment in a sector historically defined by the opposite.

Our Core Values

Legitimacy First	We only do what our authorisations permit us to do. No exceptions, whatever the tonnage.
Traceability	Every kilogram that enters our gate can be accounted for on its way out.
Safety	PPE, training and handling protocols are not overheads; they are the licence to operate.
Transparency	Our clients see the recovery logic behind our pricing.
Continuous Recovery	Every process line is reviewed against one question: what are we still losing?

01 • THE DISCIPLINE

What Waste Management Is

Collecting, transporting, treating and recovering material that has reached the end of its first useful life — safely, legally, and with the maximum possible value returned to the economy.

02 • THE ARITHMETIC

Why Recovery Matters

Recycling one tonne of circuit boards recovers more gold than 17 tonnes of mined ore. Recovery isn't charity for the planet — it is the cheaper, cleaner and increasingly the only legal way to source secondary raw material.

03 • THE RETURN

The Business Case

Beyond compliance, recycling reduces landfill liability, protects brand reputation, unlocks scrap value from written-off assets, and delivers the documented evidence your ESG and CSR reporting now demands.

From a Single Authorisation to an Integrated **Recovery Facility**

Advait Green Recycling was established in Year with a clear intent — to build formal, traceable recycling capacity in a sector still dominated by informal handling.

2019

Advait Green Recycling incorporated at City, Gujarat.

2020

GPCB authorisation received for e-waste collection, dismantling and recycling.

2021

First XX,XXX sq. ft. processing facility commissioned at Location.

2022

Plastic waste recycling line added; PWM authorisation obtained.

2023

CPCB EPR registration; EPR advisory vertical launched.

2024

ISO 9001, 14001 and 45001 certifications achieved.

2025

Battery and solar module waste handling capability commissioned.

2026

Crossed XXX MT processed and XXX + client organisations.

MECHANICAL SEGREGATION LINE — LOCATION FACILITY

One Partner Across the Full Waste Lifecycle

Most organisations end up with three vendors — one for IT disposal, one for plastic, one for compliance paperwork — and three sets of documentation that don't reconcile. We built our service lines to remove that problem.

01

E-Waste Recycling & Management

End-to-end collection, de-manufacturing, segregation and material recovery for IT assets, consumer electronics, telecom equipment and industrial electronics.

02

Plastic Waste Management

Collection, sorting, shredding and granulation of post-consumer and post-industrial plastic waste, with full PWM Rules documentation.

03

Extended Producer Responsibility

Registration, target planning, channel partner mapping, quarterly filing and certificate issuance for producers, importers and brand owners.

04

Secure Data Destruction

Onsite and offsite media sanitisation and physical destruction, with serial-wise Certificates of Destruction for every device.

05

Battery & Solar Panel Recycling

Handling of lithium-ion, lead-acid and end-of-life solar module waste under the Battery Waste Management Rules.

06

Reverse Logistics & Asset Buyback

PAN-India collection network, transparent scrap valuation and buyback for bulk decommissioning and refresh cycles.

Also offered

Refurbishment & Asset Reuse — grading, testing, data-wiped refurbishment and buyback credit for equipment with usable life left. · **Industrial & Other Streams** — segregated dry waste, metal and cable scrap recovery, packaging recycling, onsite segregation programme design, waste audits and zero-landfill consulting.

MANUAL DE-MANUFACTURING BAY — EVERY ASSET LOGGED BY SERIAL BEFORE TEARDOWN

E-Waste Recycling & Management

Recover the value. Retire the liability.

Electronic waste is the fastest-growing waste stream in the country, and the most legally sensitive to dispose of carelessly. Under the E-Waste (Management) Rules, the generator's responsibility does not end at handover — it ends at documented, authorised treatment. **We take over that entire chain.**

What we handle

- **IT equipment** — desktops, laptops, servers, monitors, printers, networking hardware
- **Consumer electronics** — televisions, air conditioners, refrigerators, washing machines
- **Telecom infrastructure** — switches, routers, base station equipment, cabling
- **Industrial electronics** — control panels, PLCs, instrumentation, UPS systems
- **Medical electronics** if authorised
- **Mobile devices**, tablets, accessories and batteries

Our process

01	Waste audit and category-wise classification	05	Manual de-manufacturing and hazardous fraction segregation
02	Quotation with transparent recovery-based valuation	06	Mechanical shredding and metal recovery
03	Sealed collection under valid manifest, GPS-tracked transport	07	Downstream channelling of PCBs to authorised smelters
04	Gate-entry weighment and photographic record	08	Issue of Certificate of Recycling and Form-wise records

What you receive

Certificate of Recycling · Weighment and manifest records · Serial-wise asset destruction list · Environmental impact summary · EPR credit documentation where applicable

Plastic Waste Management

From discarded packaging back to usable polymer.

We collect, sort and reprocess post-consumer and post-industrial plastic waste into clean granulate that can re-enter manufacturing — supporting brand owners and importers in meeting their PWM recycling targets with verifiable evidence.

Categories handled

Cat I	Rigid packaging — PET, HDPE, PP containers
Cat II	Flexible packaging — single-layer films, pouches, sachets
Cat III	Multi-layered packaging (MLP)
Cat IV	Compostable plastics <u>if applicable</u>

Capabilities

- Segregation by polymer type and colour
- Washing, drying, shredding and granulation
- Agglomeration for film waste
- Batch-wise quality testing before dispatch
- Capacity: XXX MT/Month

Documentation provided

PWM recycling certificates · Category-wise processing records · Quarterly reconciliation against EPR targets

Output specification

GRANULATE

Washed, dried and size-graded pellets, dispatched batch-wise against a test report.

AGGLOMERATE

Densified film waste, suitable for re-extrusion into secondary film and moulded goods.

TRACEABILITY

Every batch carries a lot number tying output back to the inbound consignment and its manifest.

Extended Producer Responsibility

The compliance is mandatory. The complexity doesn't have to be yours.

If you manufacture, import or brand a product that eventually becomes electronic, plastic or battery waste, EPR obligations apply to you — and the filing requirements have only tightened. We act as your compliance partner end to end.

Who this is for

Producers	Manufacturers	Importers
Brand owners	E-commerce sellers	
Refurbishers	Bulk consumers	

Scope of engagement

01	Applicability assessment and category determination
02	CPCB EPR registration and portal onboarding
03	Annual target computation from placement-on-market data
04	Collection channel design and authorised partner mapping
05	Physical collection execution against targets
06	Quarterly and annual return filing
07	EPR certificate procurement and reconciliation
08	Audit support and query response handling

Filing deadlines are not negotiable. Quarterly returns and annual reconciliation carry penalties for late or unsupported submission. We track your calendar and file against evidence we have physically collected.

Your compliance calendar

Q1-Q4	Quarterly return filing against collected and certified tonnage
Annual	Target reconciliation and annual return submission
Ongoing	Certificate procurement, portal queries and audit response

What you receive

A single compliance file per financial year — registration certificate, category-wise target computation, collection evidence with manifests and weightment records, procured EPR certificates, filed returns with acknowledgement numbers, and a reconciliation statement showing target against achievement. Everything an auditor asks for, in the order they ask for it.

Secure Data Destruction

Retired hardware carries live risk. We remove both.

Formatting is not erasure. Any decommissioned drive that leaves your premises with recoverable data is a breach waiting to be discovered — and under the DPDP Act, an expensive one.

Options available

ONSITE

At your premises

Our team performs sanitisation or physical destruction on site, witnessed by your IT or security officer.

OFFSITE

Sealed transport

Tamper-evident transport to our dedicated destruction room, with client-witnessed or CCTV-recorded processing.

SOFTWARE

Sanitisation

Multi-pass overwriting to recognised wiping standards, with per-device logs.

PHYSICAL

Destruction

Degaussing, drilling, crushing or shredding of drives and media.

Media covered

HDDs

SSDs

Magnetic tapes

Optical media

USB drives

Memory cards

Mobile devices

Servers & NAS

Deliverables

Serial-wise Certificate of Data Destruction · Video or photographic evidence on request · Chain-of-custody documentation

The Energy Transition Creates Its Own **Waste Stream**

Battery & Solar Panel Recycling

Battery waste — lithium-ion (EV, laptop, handset, energy storage), lead-acid (automotive, inverter, UPS), nickel-cadmium and other industrial chemistries. Handled with dedicated discharge, storage and segregation protocols under the Battery Waste Management Rules, [2022](#).

Solar module waste — end-of-life and damaged photovoltaic panels, dismantled for aluminium frame, glass, junction box and cell recovery, with residues channelled to authorised processors.

Li-ion

Lead-acid

Ni-Cd

EV packs

UPS & inverter

PV modules

Reverse Logistics & Asset Buyback

Multi-site collection, single reconciliation.

For organisations decommissioning across several locations, the hard part isn't recycling — it's coordination. We manage collection scheduling, packaging, transport documentation and consolidated reporting so you close the cycle with one set of numbers.

- PAN-India collection through owned and partner networks
- Bulk decommissioning and refresh-cycle support
- Transparent scrap valuation with recovery-basis breakup
- Buyback against functional and non-functional assets
- Consolidated multi-site reporting and single-point invoicing

GPS-TRACKED COLLECTION FLEET — [XX](#) VEHICLES

Gate to Certificate

Five stages, each with its own record. The documentation isn't produced at the end — it accumulates as the consignment moves.

01

Assess

We audit your waste stream, categorise it under the applicable rules, and quote against actual recoverable value.

RECORD PRODUCED

Waste audit report · Category sheet · Recovery-based quotation

02

Collect

Sealed, GPS-tracked transport under a valid manifest. Weighment recorded at pickup and at gate entry.

RECORD PRODUCED

Movement manifest · Pickup weighment slip · Transport log

03

Sort & Dismantle

Manual de-manufacturing followed by mechanical segregation into ferrous, non-ferrous, plastics, glass, PCB and hazardous fractions.

RECORD PRODUCED

Gate-entry weighbridge slip · Serial-wise teardown list · Photographic record

04

Recover

Shredding, density separation and metal recovery lines return clean secondary raw material to industry.

RECORD PRODUCED

Fraction-wise yield record · Downstream channelling documents

05

Certify

Certificate of Recycling, Certificate of Data Destruction where applicable, and quarterly EPR filing support.

RECORD PRODUCED

Certificate of Recycling · Certificate of Data Destruction · Form-wise records

WHY ADVAIT GREEN

Fully authorised

Every consignment moves and is treated under valid CPCB/SPCB authorisation, so your liability actually transfers.

Audit-ready documentation

Manifests, weighbridge slips, destruction certificates and Form-wise records, issued as standard, not on request.

Transparent valuation

You see the recovery basis behind every buyback number we quote.

Zero landfill commitment

Our target is complete diversion of processed material from landfill.

Data security by default

Chain-of-custody sealing and witnessed destruction available for regulated industries.

Single accountable partner

E-waste, plastic, battery and compliance handled by one team.

“Advait handled the decommissioning of **XXX** machines across three of our sites without a single documentation gap. The certificates were with us before the invoice was.”

NAME, DESIGNATION, COMPANY

“We came to them for EPR filing and stayed for the whole waste programme. They understand the rules better than most consultants we've worked with.”

NAME, DESIGNATION, COMPANY

Engineered for Recovery, Not Just **Disposal**

Our facility is built as a series of connected recovery stages rather than a single shredding operation — because different fractions need different treatment to retain their value.

LINE 01

E-Waste Line

Manual de-manufacturing bays · Primary shredder · Magnetic and eddy-current separation · Density-based sorting · PCB segregation and storage

Capacity **XXX** MT/Month

LINE 02

Plastic Line

Sorting conveyor · Washing and drying unit · Granulator and agglomerator · Batch-wise quality testing

Capacity **XXX** MT/Month

LINE 03

Battery & Solar

Dedicated segregated storage · Discharge and dismantling area · Onward channelling to authorised downstream processors

Capacity **XX** MT/Month

SUPPORT

Support Infrastructure

Electronic weighbridge · CCTV-covered material movement · Bonded and hazardous storage zones · Dedicated data destruction room · Effluent and air pollution control systems · Fleet of **XX** GPS-tracked collection vehicles

OUR PEOPLE

Behind every tonne processed is a team of **XXX** people — dismantlers, line operators, drivers, compliance officers and coordinators. We invest in them because manual de-manufacturing is skilled work, and skilled work deserves training, protective equipment, health checks and a career path.

Authorisations, on the Record

CERTIFICATION / AUTHORISATION	REFERENCE	VALIDITY
CPCB EPR Registration	No.	Date
GPCB Consent to Operate	No.	Date
E-Waste (Management) Rules Authorisation	No.	Date
Plastic Waste Management Authorisation	No.	Date
Battery Waste Management Registration	No.	Date
ISO 9001:2015 — Quality Management	No.	Date
ISO 14001:2015 — Environmental Management	No.	Date
ISO 45001:2018 — Occupational Health & Safety	No.	Date
GST / CIN	No.	—

OUR IMPACT

XXX MT e-waste processed annually	XXX MT plastic recycled monthly	X, XXX kg material recovered daily	XX % waste diverted from landfill
XXX + corporate clients served	XX districts covered	XXX team members	X, XXX tonnes CO ₂ e emissions avoided

NUMBERS VERIFIED FOR FY 2025-26

SECTORS WE SERVE

IT & ITES	Banking & Financial Services	Manufacturing & Automotive	Pharmaceuticals & Healthcare
Telecom & Data Centres	Educational Institutions	Government & PSUs	Retail & E-Commerce
Real Estate & Facility Management	Textiles		

Beyond the Gate

Awareness drives

At schools, colleges and residential societies on household e-waste segregation.

Skill training

For informal sector workers transitioning into formal recycling roles.

Collection camps

With corporate partners, RWAs and municipal bodies.

Facility greening

Tree plantation and green cover at [Location](#).

Want to See How It Actually Works?

We welcome client and institutional visits. Book a walkthrough and follow a consignment from gate to granulate. Or tell us what you have and where it is — we'll come back within one working day with a collection plan and an indicative valuation.
