

COMPANY PITCH • FY 2025-26

An authorised recycler that transfers your waste liability — with the documentation to prove it.

Integrated recovery of electronic, plastic and battery waste. One partner, one documentation trail, one accountable contact — from collection to certificate.

Advait Green Recycling Private Limited

VAMAJ, MAHESANA • GUJARAT • INDIA • GSTIN 24ABECA2823M1ZQ

PRIVATE & CONFIDENTIAL
PREPARED FOR CLIENT DISCUSSION

India's formal recycling gap is a compliance liability for waste generators — Advait Green closes it with **an integrated, fully documented recovery chain**

01 · THE SITUATION	02 · THE COMPLICATION	03 · THE RESOLUTION
Volume is rising faster than formal capacity - India generates over 1.7 million tonnes of e-waste annually - Less than a third reaches a formal recycling channel - The balance is burned, buried or dismantled by hand - E-waste, plastic and battery rules now place the obligation on the generator and the producer, not the handler	Compliance is fragmented across vendors - Most organisations run three separate vendors — IT disposal, plastic, compliance filing - Three documentation sets that do not reconcile at audit - Liability does not transfer unless treatment is authorised and evidenced - Retired media carries live data risk under the DPDP Act	One authorised partner, one evidence trail GPCB authorised integrated facility at Vamaj, Mahesana - Six service lines under one accountable contact - Documentation accumulates as the consignment moves, not at the end - Certificates, manifests and Form-wise records issued as standard
SO WHAT	Consolidating e-waste, plastic, battery and EPR filing with a single authorised recycler removes the reconciliation gap that fails audits — and converts a recurring compliance cost into a documented, recoverable-value transaction.	

This document moves from the market problem to our operating evidence in **five sections**

01

Market context

Why the formal recovery gap exists and who now carries the obligation.

QUESTION ANSWERED

Who now carries the legal duty, and what happens if the handler is not authorised?

p. 4-6

02

Service architecture

Six lines covering the full waste lifecycle under one authorisation set.

QUESTION ANSWERED

Which streams can one partner actually take, and under whose authorisation?

p. 7-11

03

Operating model

Gate to certificate, and the infrastructure behind each recovery stage.

QUESTION ANSWERED

What evidence is produced, and at which point in the chain?

p. 12-13

04

Credentials

Authorisations, certifications and measured recovery performance.

QUESTION ANSWERED

Can each claim be traced to a document an auditor will accept?

p. 14

05

Engagement

How a first consignment is scoped, priced and closed out.

QUESTION ANSWERED

How quickly can a first consignment close, and what does it cost?

p. 15

READING NOTE

Every quantified claim in this deck is either sourced to published rules or drawn from our own operating records; values still pending verification are marked in amber.

Two-thirds of India's electronic waste never reaches a formal channel — the recovery gap is structural, not incidental

EXHIBIT 1 · WHERE INDIA'S E-WASTE GOES

1.7M tonnes generated annually

The residual two-thirds is dismantled by hand, acid-leached or landfilled. That is a public health problem — and, for the organisation whose asset tag is still on the device, an unextinguished liability.

EXHIBIT 2 · WHERE THE OBLIGATION NOW SITS

RULE	WHO CARRIES THE DUTY
E-Waste (Management) Rules	Generator's responsibility ends only at documented, authorised treatment
Plastic Waste Management Rules	Brand owners and importers must meet category-wise recycling targets
Battery Waste Management Rules, 2022	Producers accountable for collection and refurbishment targets
DPDP Act	Data on retired media remains the holder's exposure until destroyed

WHY THIS MATTERS COMMERCIALY

Recycling one tonne of circuit boards recovers more gold than 17 tonnes of mined ore. Recovery is not environmental charity — it is the cheaper, cleaner and increasingly the only legal route to secondary raw material.

SO WHAT

Because the duty attaches to the generator and the producer rather than the collector, choosing an unauthorised or undocumented handler does not reduce exposure — it defers and compounds it.

Splitting the waste stream across three vendors is what breaks the audit trail — **not the recycling itself**

EXHIBIT 3 · THE TYPICAL FRAGMENTED MODEL

- IT disposal vendor** → Own manifest format, no EPR linkage
- Plastic scrap buyer** → Weight slips only, no category split
- Compliance consultant** → Files against evidence they did not collect

Failure point: three record sets, three weighment bases, three reporting calendars — nothing reconciles to a single tonnage at audit.

EXHIBIT 4 · THE CONSOLIDATED MODEL

- Single gate entry** → One weighbridge, one manifest series
- Segregated lines** → Fraction-wise yield recorded per lot
- One filing calendar** → EPR filed against tonnage we collected

Result: one reconciliation statement showing target against achievement, supported by evidence collected under our own authorisation.

SO WHAT

The value of consolidation is not procurement savings — it is that the tonnage on the certificate, the manifest and the EPR return are the same number, traceable to the same weighbridge.

Advait Green is built where three usually separate outcomes meet — compliance, data security and material recovery

A recycler that is commercially sound and environmentally rigorous

The name **Advait** means “not two” — industry and environment are not opposing interests. A recycling business that is not commercially sound will not survive to protect anything; one that is not environmentally rigorous does not deserve to.

We operate a **GPCB authorised** integrated facility at Vamaj, Mahesana, processing electronic, plastic and battery waste through mechanical and chemical recovery lines.

EXHIBIT 5 • THREE OUTCOMES, ONE OPERATION

OUTCOME	USUALLY HANDLED BY	HOW WE DELIVER IT
Environmental compliance	A consultant filing on third-party evidence	Filed against tonnage we physically collected and certified
Data security	An IT vendor with no destruction authorisation	Witnessed sanitisation or destruction, serial-wise certificates
Material recovery	A scrap buyer quoting an opaque lump sum	Recovery-basis valuation with fraction-wise yield disclosed
Accountability	Three contracts, three points of contact	One agreement, one contact, one reconciliation

SO WHAT

Treating compliance, data security and recovery as one operation rather than three procurements is what makes the liability transfer defensible — and the valuation verifiable.

Source: company authorisations and operating records

Six service lines cover the full waste lifecycle — each under an authorisation we hold ourselves

E-Waste Recycling & Management

01

End-to-end collection, de-manufacturing, segregation and material recovery for IT assets, consumer electronics, telecom and industrial electronics.

TYPICAL TRIGGER

IT refresh cycle · office relocation · asset write-off

E-WASTE RULES AUTHORISATION

Plastic Waste Management

02

Collection, sorting, shredding and granulation of post-consumer and post-industrial plastic waste, with full PWM Rules documentation.

TYPICAL TRIGGER

PWM target shortfall · packaging changeover

PWM AUTHORISATION

Extended Producer Responsibility

03

Registration, target planning, channel partner mapping, quarterly filing and certificate issuance for producers, importers and brand owners.

TYPICAL TRIGGER

First CPCB registration · quarterly filing deadline

CPCB EPR REGISTRATION

Secure Data Destruction

A4

Onsite and offsite media sanitisation and physical destruction, with serial-wise Certificates of Destruction for every device.

TYPICAL TRIGGER

Server decommissioning · regulated-industry audit

DEDICATED DESTRUCTION ROOM

Battery & Solar Panel Recycling

05

Lithium-ion, lead-acid and end-of-life solar module waste, handled under the Battery Waste Management Rules with dedicated discharge and storage.

TYPICAL TRIGGER

UPS replacement · EV or storage battery end-of-life

BWM REGISTRATION

Reverse Logistics & Asset Buyback

06

PAN-India collection network, transparent scrap valuation and buyback for bulk decommissioning and refresh cycles.

TYPICAL TRIGGER

Multi-site decommissioning · bulk hardware refresh

OWNED & PARTNER FLEET

SO WHAT

Because every line sits under an authorisation we hold directly, a client adding a second or third stream does not trigger a new vendor assessment — the compliance position is already established.

E-waste is the fastest-growing and most legally sensitive stream — we take over the chain from audit to certificate

EXHIBIT 6 · E-WASTE TREATMENT CHAIN				
01-02 Audit & quote Category-wise classification under the applicable rules; quotation on a transparent recovery basis. Waste audit report · Category sheet	03-04 Collect & weigh Sealed collection under valid manifest, GPS-tracked transport, gate-entry weighment and photographic record. Manifest · Weighbridge slip	05 De-manufacture Manual teardown with hazardous fraction segregation; every asset logged by serial before dismantling. Serial-wise teardown list	06-07 Recover & channel Mechanical shredding and metal recovery; PCBs channelled downstream to authorised smelters. Yield record · Channelling docs	08 Certify Certificate of Recycling issued with Form-wise records and EPR credit documentation where applicable. Certificate of Recycling

CATEGORIES ACCEPTED	
IT equipment	Desktops, laptops, servers, monitors, printers, networking hardware
Consumer electronics	Televisions, air conditioners, refrigerators, washing machines
Telecom infrastructure	Switches, routers, base station equipment, cabling
Industrial electronics	Control panels, PLCs, instrumentation, UPS systems
Mobile & medical	Handsets, tablets, accessories, batteries; medical electronics <u>if authorised</u>

CLIENT DELIVERABLE SET
▪ Certificate of Recycling ▪ Weighment and manifest records ▪ Serial-wise asset destruction list ▪ Environmental impact summary ▪ EPR credit documentation where applicable

SO WHAT

The record is produced at each stage rather than assembled afterwards, so the evidence pack is complete on the day the consignment closes — not reconstructed when an auditor asks.

Plastic recovery only counts toward a PWM target if the output is category-tagged and traceable to the inbound lot

CATEGORIES HANDLED	
Cat I	Rigid packaging — PET, HDPE, PP containers
Cat II	Flexible packaging — single-layer films, pouches, sachets
Cat III	Multi-layered packaging (MLP)
Cat IV	Compostable plastics <u>if applicable</u>
CAPACITY <u>XXX</u> MT / MONTH	

PROCESSING CAPABILITY
▪ Segregation by polymer type and colour ▪ Washing, drying, shredding and granulation ▪ Agglomeration for film waste ▪ Batch-wise quality testing before dispatch DOCUMENTATION PROVIDED PWM recycling certificates · category-wise processing records · quarterly reconciliation against EPR targets

OUTPUT SPECIFICATION
GRANULATE Washed, dried and size-graded pellets, dispatched batch-wise against a test report. AGGLOMERATE Densified film waste, suitable for re-extrusion into secondary film and moulded goods. TRACEABILITY Every batch carries a lot number tying output back to the inbound consignment and its manifest.

SO WHAT

Lot-numbered output is what converts a scrap sale into a defensible PWM target credit — without it, tonnage processed and tonnage claimable are two different numbers.

EPR obligations are mandatory and the filing window is fixed — we file against evidence we collected ourselves

EXHIBIT 7 · SCOPE OF ENGAGEMENT		
#	STEP	OUTPUT
01	Applicability assessment and category determination	Scoping note
02	CPCB EPR registration and portal onboarding	Registration certificate
03	Annual target computation from placement-on-market data	Target computation sheet
04	Collection channel design and authorised partner mapping	Channel plan
05	Physical collection execution against targets	Manifests and weighment records
06	Quarterly and annual return filing	Filed returns with acknowledgement
07	EPR certificate procurement and reconciliation	Procured certificates
08	Audit support and query response handling	Reconciliation statement

WHO THIS APPLIES TO
Producers · manufacturers · importers · brand owners · e-commerce sellers · refurbishers · bulk consumers

COMPLIANCE CALENDAR	
Q1-Q4	Quarterly return filing against collected and certified tonnage
Annual	Target reconciliation and annual return submission
Ongoing	Certificate procurement, portal queries and audit response

Filing deadlines are not negotiable

Quarterly returns and annual reconciliation carry penalties for late or unsupported submission. We track the calendar and file against physically collected evidence.

SO WHAT

A consultant who files on someone else's paperwork transfers no risk. Because collection and filing sit with the same party here, the return is supported by primary evidence — everything an auditor asks for, in the order they ask for it.

Retired hardware carries live data risk, and the energy transition is creating a waste stream of its own

SECURE DATA DESTRUCTION · SERVICE 04

Formatting is not erasure. Any decommissioned drive leaving your premises with recoverable data is a breach waiting to be discovered — and under the DPDP Act, an expensive one.

MODE	WHAT HAPPENS
Onsite	Sanitisation or physical destruction at your premises, witnessed by your IT or security officer
Offsite	Tamper-evident transport to our dedicated destruction room, client-witnessed or CCTV-recorded
Software	Multi-pass overwriting to recognised wiping standards, with per-device logs
Physical	Degaussing, drilling, crushing or shredding of drives and media

MEDIA COVERED

HDDs · SSDs · magnetic tapes · optical media · USB drives · memory cards · mobile devices · servers and NAS

BATTERY & SOLAR PANEL RECYCLING · SERVICE 05

Battery waste — lithium-ion (EV, laptop, handset, energy storage), lead-acid (automotive, inverter, UPS), nickel-cadmium and other industrial chemistries, under dedicated discharge, storage and segregation protocols.

Solar module waste — end-of-life and damaged photovoltaic panels dismantled for aluminium frame, glass, junction box and cell recovery, residues channelled to authorised processors.

REVERSE LOGISTICS & ASSET BUYBACK · SERVICE 06

For organisations decommissioning across several locations, the hard part is not recycling — it is coordination.

- PAN-India collection through owned and partner networks
- Transparent scrap valuation with recovery-basis breakup
- Buyback against functional and non-functional assets
- Consolidated multi-site reporting and single-point invoicing

SO WHAT

Data destruction and battery handling are the two areas where an unauthorised handler creates the most exposure — and the two most often bundled into a general scrap contract without either capability being verified.

Documentation is not produced at the end — it accumulates as the consignment moves through five recorded stages

EXHIBIT 8 · GATE TO CERTIFICATE				
01 Assess We audit the waste stream, categorise it under the applicable rules, and quote against actual recoverable value. Waste audit report · Category sheet · Recovery-based quotation	02 Collect Sealed, GPS-tracked transport under a valid manifest. Weighment recorded at pickup and again at gate entry. Movement manifest · Pickup weighment slip · Transport log	03 Sort & dismantle Manual de-manufacturing then mechanical segregation into ferrous, non-ferrous, plastics, glass, PCB and hazardous fractions. Weighbridge slip · Serial-wise teardown list · Photographic record	04 Recover Shredding, density separation and metal recovery lines return clean secondary raw material to industry. Fraction-wise yield record · Downstream channelling documents	05 Certify Certificate of Recycling, Certificate of Data Destruction where applicable, and quarterly EPR filing support. Certificate of Recycling · Certificate of Data Destruction · Form-wise records

WHY THIS MODEL HOLDS UP UNDER AUDIT

Fully authorised

Every consignment moves and is treated under valid CPCB/SPCB authorisation, so liability actually transfers.

Data security by default

Chain-of-custody sealing and witnessed destruction available for regulated industries.

Zero landfill commitment

Our target is complete diversion of processed material from landfill.

Transparent valuation

You see the recovery basis behind every buyback number we quote.

Audit-ready by default

Manifests, weighbridge slips and Form-wise records issued as standard, not on request.

Single accountable partner

E-waste, plastic, battery and compliance handled by one team under one agreement.

SO WHAT

Each stage generates its own record, so the evidence pack cannot fall behind the material — which is precisely the failure mode that leaves a generator exposed after handover.

The facility is built as connected recovery stages, not a single shredder — **because fractions lose value when treated alike**

EXHIBIT 9 · PROCESSING LINES AND CAPACITY		
LINE	EQUIPMENT AND STAGES	CAPACITY
01 · E-waste	Manual de-manufacturing bays · primary shredder · magnetic and eddy-current separation · density-based sorting · PCB segregation and storage	XXX MT/mo
02 · Plastic	Sorting conveyor · washing and drying unit · granulator and agglomerator · batch-wise quality testing	XXX MT/mo
03 · Battery & solar	Dedicated segregated storage · discharge and dismantling area · onward channelling to authorised downstream processors	XX MT/mo
Support	Electronic weighbridge · CCTV-covered material movement · bonded and hazardous storage zones · dedicated data destruction room · effluent and air pollution control systems · XX GPS-tracked collection vehicles	—

OUR PEOPLE

Behind every tonne processed is a team of XXX people — dismantlers, line operators, drivers, compliance officers and coordinators.

We invest in them because manual de-manufacturing is **skilled work**, and skilled work deserves training, protective equipment, health checks and a career path.

SO WHAT Segregating before shredding is what preserves fraction value — it is also what makes a fraction-wise yield disclosure possible, and therefore what makes our valuation auditable.

Source: company facility records; capacities pending verification

Every claim in this deck rests on an authorisation or a certification — held directly, not through a channel partner

EXHIBIT 10 · AUTHORISATIONS AND CERTIFICATIONS		
CERTIFICATION / AUTHORISATION	REFERENCE	VALIDITY
CPCB EPR Registration	No.	Date
GPCB Consent to Operate	No.	Date
E-Waste (Management) Rules Authorisation	No.	Date
Plastic Waste Management Authorisation	No.	Date
Battery Waste Management Registration	No.	Date
ISO 9001:2015 — Quality Management	No.	Date
ISO 14001:2015 — Environmental Management	No.	Date
ISO 45001:2018 — Occupational Health & Safety	No.	Date
GSTIN	24ABECA2823M1ZQ	

EXHIBIT 11 · MEASURED IMPACT, FY 2025-26		
XXX MT e-waste processed p.a.	XXX MT plastic recycled monthly	XX% diverted from landfill
+XXX corporate clients served	XX districts covered	X,XXX tonnes CO ₂ e avoided
SECTORS SERVED		
IT & ITES · banking and financial services · manufacturing and automotive · pharmaceuticals and healthcare · telecom and data centres · educational institutions · government and PSUs · retail and e-commerce · real estate and facility management · textiles		

SO WHAT

Holding the authorisations directly matters at audit: a channel-partner arrangement puts a second party between your consignment and the certificate, and that is where liability transfer is most often challenged.

Source: company certification register. Reference numbers and validity dates to be inserted before external circulation

A first consignment can be scoped, collected and certified within a single reporting quarter

EXHIBIT 12 · HOW AN ENGAGEMENT STARTS

STEP	WHAT HAPPENS	INDICATIVE TIMING
Enquiry	Tell us what you have and where it is	Response within one working day
Audit	Waste audit, category classification and indicative valuation	⌘ working days
Quotation	Recovery-based pricing with the valuation basis disclosed	⌘ working days
Collection	Scheduled sealed pickup under manifest, GPS-tracked	By agreed window
Certification	Certificates and Form-wise records issued	On consignment close-out

Or start with a facility visit

We welcome client and institutional visits. Book a walkthrough and follow a consignment from **gate to granulate** — the fastest way to verify that the process behind the certificate is real.
